Portfolio tertit133.github.io	Location Perm, Russia

PROFESSIONAL SUMMARY

Entry-level software developer with hands-on experience delivering paid freelance projects and practical skills in electronics maintenance and repair. Experienced in managing tasks from requirements gathering and specification alignment through implementation, revisions, and client handover. Works with C++, C#, Python, and JavaScript, and uses Git and GitHub. Additional experience repairing electronic boards at component level provides a practical understanding of hardware and computer systems. Seeking a Junior Developer or Junior Software Engineer role to contribute to real-world projects and grow within a development team.

CORE COMPETENCIES

Software Development	C++, C#, Python, JavaScript; development of custom software solutions.
Tools	Git and GitHub; version control and repository workflows.
Electronics	Electronic diagnostics, soldering, component replacement, and board-level repair.
Client & Project Work	Requirements gathering, specification alignment, time estimation, delivery, and revisions.
Language	English — B2; technical documentation and direct communication with international clients.

PROFESSIONAL EXPERIENCE

Software Developer (Freelance) — Private Commercial Projects

Jan 2026 — Present

- Deliver custom paid software projects across different subject areas, including work for returning clients.
- Clarify client needs, gather requirements, and agree on project scope, functionality, technical specifications, and deadlines.
- Develop software solutions using C++, C#, Python, and JavaScript.
- Manage projects from initial discussion through implementation and delivery; incorporate feedback and complete agreed revisions.
- Communicate directly with international clients in English without an interpreter.

Electronics Maintenance & Repair Technician — PlayDay — Arcade Gaming Venue

Jul 2026 — Present

- Maintain and support a fleet of more than 140 arcade machines, helping keep equipment operational.
- Diagnose electronic assemblies and circuit boards, identify faulty components, and replace defective parts.
- Repair circuit boards at component level through soldering and individual component replacement rather than replacing entire assemblies.
- Help reduce spare-parts costs and equipment downtime through component-level repair.
- Resolve technical faults promptly and verify equipment operation after repairs.

PROFESSIONAL EXPERIENCE — CONTINUED

Courier — Yandex Eats 2023 — 2024

- Completed daily deliveries under high workload while meeting required delivery timeframes.
- Met weekly and monthly order-volume targets and received performance bonuses.
- Planned routes, prioritized tasks, and communicated with customers and restaurant partners.
- Strengthened punctuality, accountability, independence, and the ability to work under time pressure.

EDUCATION

Perm Polytechnic College named after N. G. Slavyanov
Specialization: 09.02.01 — Computer Systems and Complexes. Qualification: Computer Systems Technician.
Expected graduation: 2027.

TECHNICAL SKILLS

Programming Languages: C++, C#, Python, JavaScript.
Version Control: Git, GitHub.
Hardware: electronic component diagnostics, circuit-board repair, soldering, and component replacement.
Project Delivery: requirements gathering, technical specifications, deadline coordination, delivery, and post-delivery revisions.

LANGUAGES

English — B2 (Upper-Intermediate). Able to read technical documentation, discuss project requirements, and communicate directly with international clients without an interpreter.

PROFESSIONAL STRENGTHS

Analytical thinking · technical curiosity · self-management · accountability · attention to detail · troubleshooting · problem-solving · focus on quality and deadlines.

ADDITIONAL INFORMATION

Interested in Junior Developer / Junior Software Engineer opportunities. Open to learning, team collaboration, and professional development. Office or remote work by arrangement.
